

June 5, 2006

The Honorable John Moolenaar  
State Representative  
Michigan State Capitol  
PO Box 30014  
Lansing, MI 48909-7514

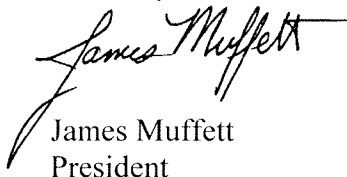

Dear Representative Moolenaar,

This letter is to affirm CTV's strong support for HB5251 and to congratulate you for this most progressive and essential piece of legislation. There is no doubt that scientific advances in recent years have generated significant questions regarding the validity of some very popular theories, including evolution and global warming. It imperative that the public school science curriculum keep pace with progress and seek to equip students to effectively evaluate scientific theories through exposure to all of the evidence—whether it is supportive or critical of these theories.

It is our hope that your colleagues in the House and Senate will consider HB 5251 with an open mind and lend their support. How can anyone be opposed to an honest, thorough and open discussion that allows the evidence to speak for itself? Any scientific theory should be able to withstand and even invite scrutiny in the interest of discovering the truth.

Thank you for your bold leadership and please know that we are making this legislation a top priority!

Sincerely,

James Muffett  
President
